

## **Release 1:**

- To handle user account creation and account-accessing activities, an account authentication system was created.
- Login capability was added, enabling users to access the system.
- A logout option has been added to provide users the ability to securely quit the system.
- A registration system was developed to allow new users to register accounts.
- To handle user responsibilities and permissions, a permission and access control system was implemented.

## **Release 2:**

- Student pages were added, giving a separate interface for students.
- The option for students to examine a list of available job postings was implemented.
- A tool enabling employers to access a list of registered students was added.

## **Release 3:**

- Submission pages have been introduced to allow students to enter their progress into the system.
- Designed admin pages with functionality for Earn It employees.
- Added a linking page to allow Earn It staff to link jobs and students.
- An overview page for administrators was established to view all student and company accounts.
- Admins may create new job listings using the job creation page.

## **Release 4:**

- Added the option for companies to flag and for admins to handle flagged submissions.
- Set up a notification system to notify students of flagged submissions.
- Invoice functionality was added to produce invoices for being uploaded and downloaded at any need.
- Created a search bar across different pages to allow users to search for specific information or records.
